ABSTRACT OF THE DISCLOSURE

A system and method of producing labels at remote locations  
5 worldwide in communication with a server and central database via the  
internet is shown and described. The system and method also allows the  
ordering of labels at remote locations worldwide in communication with  
the server and central database via the internet. Automatic typesetting  
for label production is provided wherein various types of production,  
10 image data files are generated in accordance with different requirements  
from various customers and wherein the generated production files can  
be used directly by the production machines for which they were  
generated, different types of production files being automatically  
generated for different types of production machines or printing  
15 methods. The system and method of the present invention  
accommodates vastly different printing methods including thermal  
printing, lithographic printing, etc.
